DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Gysling et al. (US 2002/0064206 A1). Gysling discloses a system for detecting acoustic signals in the producing area of a well bore comprising an optical fiber having a core and cladding; and at least one periodic refractive index perturbation formed within the optical fiber, fiber Bragg gratings (FBG), see Para [0021].

Claims 4-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Berg et al. (US 2004/0114463 A1). Berg discloses a system for detecting acoustic signals in the producing area

Art Unit: 2883

of a well bore comprising an optical fiber having a core and cladding; and at least one periodic refractive index perturbation formed within the optical fiber, fiber Bragg gratings (FBG), where in the optical interrogator in the optical communication with the optical fiber, the interrogator for transmitting light down the optical fiber and for receiving light reflected by the at least one Bragg grating. The process programmed to analyze the reflected light to provide a signal representative of the presence of a detected acoustic signal in the form of an acoustic sensor (Para [0029] and Fig. 2). Berg discloses the sensor may be clamped along the side of the well to prevent it from becoming loose in the annulus of the well (Para [0113]).

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Erin D. Chiem whose telephone number is (571) 272-3102. The examiner can normally be reached on Monday - Thursday 9AM - 5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank G. Font can be reached on (571) 272-2415. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
